

LNG is one of the solutions available to the shipping industry to comply with new IMO regulations coming into force by January 2015. The EU cross-border project “MarTech LNG” aims at fostering LNG development in the South Baltic Sea Region (SBSR) and supporting the cooperation and knowledge transfer between the key LNG stakeholders involved. Norway has solid experience with the LNG infrastructure and supply chain, thus it is only natural to seek inspiration and knowledge from the Norwegian experience on how an environmental challenge is turned into a viable business case. The MarTech LNG project is bringing together the relevant business and knowledge stakeholders of the SBS Region to experience LNG at first hand.
